

Spectrum Health Intensive Care Unit Renovation

*Challenge:
Provide constant
visual access for
care providers into
each patient room
using the existing
triangular footprint*

- 10,700-square-foot renovation with 22 beds
- sub-nurse stations are located along the hallway to accommodate the needs of the patients
- all rooms are easily accessed via an internal core
- construction was phased so operations were not disrupted
- consistent design tools, including color, finishes, materials, and flooring improve overall wayfinding
- adjacent to Burns Unit, and both areas were designed with similar layout to serve as overflow for each other if necessary
- Grand Rapids, MI
